ATTACK!!

A cyber attack on Russian tech giant Yandex's servers (YNDX.O) in August and September was the largest known distributed denial-of-service (DDoS) attack in the history of the internet, the company said on Thursday.

Yandex said it had seen 5.2 million RPS on Aug. 7, 6.5 million RPS on Aug. 9, 9.6 million RPS on Aug. 29, 10.9 million RPS on Aug. 31 and finally 21.8 million RPS on Sept. 5.

A U.S. cybersecurity firm Cloudflare (NET.N), which is widely used by businesses and other organisations to help defend against DDoS attacks, confirmed the attack and said in August the largest DDoS attack it was aware of reached 17.2 million RPS earlier this year.
