FIN7 hackers target US companies
with BadUSB devices to install

.txt
```

The FBI said that FIN7, an infamous cybercrime group that is behind the Darkside and BlackMatter ransomware operations, had sent malicious USB devices to US companies over the past few months in the hopes of infecting their systems with malware and carrying out future attacks.

“There were two.....

.txt
```

“There were two variations of packages - those imitating HHS accompanied by letters referring to COVID 19 and those imitating Amazon that arrived in a decorative gift box containing a fraudulent thank you letter, counterfeit gift card, and a USB.”

In both cases, the packages contained LilyGO-branded USB devices.

But the FBI said....

.txt
```

But the FBI said that the devices would execute a BadUSB attack, where the USB drive would register itself as a keyboard instead and send a series of preconfigured automated keystrokes to the user's PC. These keystrokes would run PowerShell commands that downloaded and installed various malware strains that acted as backdoors for the attackers into the victims' networks.
